

X₂ F System TM

Patent 7,182,156-D496,948-D505,435-D505,141

Overburden casing system

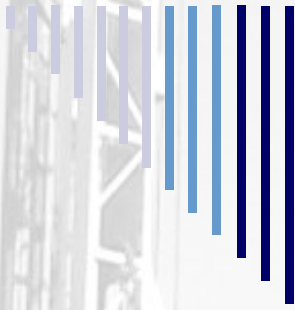

- **For shallow blind holes**
- **Easy to retrieve the casing**
- **Oversized crown for concrete injection**
- **Fast and Economical**

Xs F system

TM

The Xs F (Floating) system is especially designed for micropiling, piling, anchors and other civil engineering applications. Primarily used in shallow blind holes.

-Very easy to use

This system has only 3 components: The driver bit, a welded ring and a lost crown. As long as you keep turning in the same direction, the crown will stay in it's locking groove.

- Easy to unlock

By reversing the rotation, the crown will automatically drop to the bottom of the hole.

- Easy to retrieve the casing

If you have to retrieve the casing, this system is by far the best. Once the ring is dropped, nothing protrudes out of the casing. A minimum force is needed to pull back.

- Re-usable weld ring

If you retrieve the casing, you can re-use the welded ring.

- Adaptable drilling diameter

If the casing needs to be grouted in the soil with clearance, we can make the crown of the Xs F system to the desired diameter.
