

XS T/V2 SYSTEM

XS T/V2 DRILLING SYSTEM :

THE MOST ROBUST CHOICE FOR EXCEPTIONAL DEPTHS

The Xs T/V2 drilling system is the most robust model in our entire range of drilling systems, designed to reach depths of over 100 meters without the need for telescoping. This feature makes it an extremely reliable and high-performing tool, particularly suited for tasks requiring increased resistance.

THIS SYSTEM OFFERS SEVERAL NOTABLE ADVANTAGES

Optimized impact surface :

Thanks to an improved design, the Xs T/V2 maximizes the impact surface, leading to better durability.

Better debris removal :

The optimized design of the evacuation system allows for more efficient debris management, ensuring a smoother operation with fewer obstructions.

Innovative locking system :

The new locking mechanism enhances the system's lifespan and reliability at greater depths.

Extended compatibility :

The Xs T/V2 can be used with standard or heavy-duty (HD) ring bits, offering great flexibility according to the specific needs of projects.

Carbide-tipped cutter :

This system provides enhanced tool life and superior cutting efficiency, maintaining optimal performance even under high-stress or abrasive drilling conditions.

Therefore, the Xs T/V2 is the ideal choice for demanding drilling operations, offering robustness, performance, and flexibility.
